

```
20
21 def verify_password(password, hashed_password):
22     return pwd_context.verify(password, hashed_password)
23
24
25 def get_password_hash(password):
26     return pwd_context.hash(password)
27
28
29 def authenticate_user(username: str, password: str, session: Session):
30     user = get_user(session, username)
31     print(user.hashed_password)
32     if not user:
33         return False
34     if not verify_password(password, user.hashed_password):
35         print(password)
36         return False
37     return user
38
```

you did the thing
